Towards Sustainable Urban Mobility:

Insights from Portland's journey

Portland, Oregon, is a US city that has built an international reputation for its achievements in developing a more sustainable urban transport system. Portland's mixture of trams (both on the ground and in the air), buses and bicycles, along with innovative approaches to urban land use, distinguish it from most North American cities. What factors have contributed to Portland's success? What challenges lie ahead? What lessons can we learn from Portland's journey? The 2010 Ogden Transport Lecturer, Professor Jennifer Dill, will draw insight from her research in Portland to provide answers to these questions.

Professor Dill is currently the Chair of the US Transportation Research Board committee on Bicycle Transportation. Her research interests focus on the interactions of transportation planning, travel behavior, health, the environment, and land use, as well as transportation finance.
